Ancient Greek mathematics meet modernist design

Nearly a century before Mondrian made geometrical red, yellow, and blue lines famous, 19th century mathematician **Oliver Byrne** employed the color scheme for his 1847 edition of Euclid's **mathematical and geometric treatise *Elements***. Byrne's idea was to use color to make learning easier and "diffuse permanent knowledge". The result has been described as **one of the oddest and most beautiful books of the 19th century**.

The facsimile of Byrne's vivid publication is now available as part of TASCHEN'S *Bibliotheca Universalis* series. A **masterwork of art and science**, it is as beautiful in the boldness of its red, yellow, and blue figures and diagram, as it is in the mathematical precision of its theories. In the simplicity of forms and colors, the pages anticipate the vigor of **de Stijl and Bauhaus** design. In making complex information at once accessible and aesthetically engaging, they mark a **forerunner in the information graphics** that today define much of our data consumption.
